whiteleaf manzanita	Arctostaphylos manzanita	ARMA
whitethorn ceanothus	Ceanothus cordulatus	CECO
whitevein shinleaf	Pyrola picta	PYPI2
wild oat	Avena fatua	AVFA
wild onion	Allium spp.	ALLIU
wildrye	Elymus spp.	ELYMU
willow	Salix spp.	SALIX
woodland strawberry	Fragaria vesca	FRVE
wooly marbles	Psilocarphus spp.	PSILO
yellow carpet	Blennosperma nanum var. nanum	BLNAN
yellow salsify	Tragopogon dubius	TRDU
yellow starthistle	Centaurea solstitialis	CESO3
yerba santa	Eriodictyon spp.	ERIOD

Table 14.--Index of Plant Symbols and Common and Scientific Plant Names

(This table aids in correct plant identification and serves as a cross-reference to plant species listed in table 12. The plant synonymy as reported in the USDA-NRCS National Plants Database at the time of publication is used)

Plant symbol	Local common name	Scientific name
ABCO	white fir	Abies concolor
ABMA	California red fir	Abies magnifica
ACBA	Bailey acacia	Acacia baileyana
ACGL	Rocky Mountain maple	Acer glabrum
ACMA3	bigleaf maple	Acer macrophyllum
ACMI2	common yarrow	Achillea millefolium
ACMO2	soft blow wives	Achyrachaena mollis
ACOCC	California needlegrass	Achnatherum occidentale ssp. californicum
ADFA	chamise	Adenostoma fasciculatum
AECA	California buckeye	Aesculus californica
AETR	barbed goatgrass	Aegilops triuncialis
AGROP2	wheatgrass	Agropyron spp.
AICA	silver hairgrass	Aira caryophyllea
ALLIU	wild onion	Allium spp.
ALRH2	white alder	Alnus rhombifolia
ALVIC	mountain alder	Alnus viridis ssp. crispa
AMBRO	ragweed	Ambrosia spp.
AMSIN	fiddleneck	Amsinckia spp.
AQUIL	columbine	Aquilegia spp.
ARCTO3	manzanita	Arctostaphylos spp.
ARDO3	Douglas sagewort	Artemisia douglasiana
ARMA	whiteleaf manzanita	Arctostaphylos manzanita
ARME	Pacific madrone	Arbutus menziesii
ARNE	pinemat manzanita	Arctostaphylos nevadensis
ARNIC	arnica	Arnica spp.
ARPA6	greenleaf manzanita	Arctostaphylos patula
ARVI4	sticky whiteleaf manzanita	Arctostaphylos viscida
ATCA2	fourwing saltbush	Atriplex canescens
ATLE	big saltbush	Atriplex lentiformis
AVFA	wild oat	Avena fatua
BAPI	coyotebrush	Baccharis pilularis
BIFR	beggartick (sticktights)	Bidens frondosa
BLNAN	yellow carpet	Blennosperma nanum var. nanum
BRASS2	mustard	Brassica spp.
BRBR5	rattlesnake brome	Bromus briziformis
BRDI3	ripgut brome	Bromus diandrus
BRHOH	soft chess	Bromus hordeaceus ssp. hordeaceus
BRMA4	mountain brome	Bromus marginatus
BRMI3	bluestars	Brodiaea minor
BRODI	brodiaea	Brodiaea spp.
BROMU	brome	Bromus spp.
BROR2	Orcutt brome	Bromus orcuttianus
BRRU2	red brome	Bromus rubens
BRTE	cheatgrass	Bromus tectorum
CAAP4	wavyleaf Indian paintbrush	Castilleja applegatei
CADE27	incense cedar	Calocedrus decurrens
CALOC	mariposa lily	Calochortus spp.
CAREX	carex	Carex spp.
CECO	whitethorn ceanothus	Ceanothus cordulatus
CECU	buckbrush	Ceanothus cuneatus
CEIN3	deerbrush	Ceanothus integerrimus
CEJE	Jepson ceanothus	Ceanothus jepsonii
CELE	Lemmon ceanothus	Ceanothus lemmonii
CEOC	hackberry	Celtis occidentalis
CEOC2	common buttonbush	Cephalanthus occidentalis
CEOR9	California redbud	Cercis orbiculata
CEPR	prostrate ceanothus	Ceanothus prostratus
CERCI2	redbud	Cercis spp.
CESO3	yellow starthistle	Centaurea solstitialis

Table 14.--Index of Plant Symbols and Common and Scientific Plant Names--Continued

Plant symbol	Local common name	Scientific name
CHFO	mountain misery	Chamaebatia foliolosa
CHLOR3	soap plant	Chlorogalum spp.
CHSE11	Sierra chinquapin	Chrysolepis sempervirens
CHUM	pipsissewa	Chimaphila umbellata
CHUMO2	western princes pine	Chimaphila umbellata ssp. occidentalis
CIQU2	Alameda County thistle	Cirsium quercetorum
CIRSI	thistle	Cirsium spp.
CLPE	miners lettuce	Claytonia perfoliata
CLPU2	purple clarkia	Clarkia purpurea
COCOC	California hazel	Corylus cornuta var. californica
CONU4	Pacific dogwood	Cornus nuttallii
CORNU	dogwood	Cornus spp.
CRSC	swampgrass	Crypsis schoenoides
CUAR	Arizona cypress	Cupressus arizonica
CYDA	bermudagrass	Cynodon dactylon
CYEC	hedgehog dogtail	Cynosurus echinatus
CYSC4	Scotch broom	Cytisus scoparius
DAGL	orchardgrass	Dactylis glomerata
DELPH	larkspur	Delphinium spp.
DESCH	hairgrass	Deschampsia
DICAC5	bluedicks	Dichelostemma capitatum ssp. capitatum
DISTI	saltgrass	Distichlis ssp.
DODEC	shootingstar	Dodecatheon spp.
DOWNI	calicoflower	Downingia spp.
ELAN	Russian olive	Elaeagnus angustifolia
ELEL5	bottlebrush squirreltail	Elymus elymoides
ELELC2	squirreltail	Elymus elymoides ssp. californicus
ELEOC	spikerush	Eleocharis spp.
ELGL	blue wildrye	Elymus glaucus
ELYMU	wildrye	Elymus spp.
ERCA33	coyote thistle	Eryngium castrense
ERIOD	yerba santa	Eriodictyon spp.
ERIOG	buckwheat	Eriogonum spp.
ERODI	filaree	Erodium spp.
ESRU4	pink escallonia	Escallonia laevis
EUCAL	eucalyptus	Eucalyptus spp.
FEME	foxtail fescue	Festuca megalura
FESTU	fescue	Festuca spp.
FORSY	forsythia	Forsythia spp.
FRCA12	chapparal coffeeberry	Frangula californica
FRCAC5	California buckthorn	Frangula californica ssp. californica
FRCAT2	California buckthorn	Frangula californica ssp. tomentella
FRLA	Oregon ash	Fraxinus latifolia
FRPU7	Pursh's buckthorn	Frangula purshiana
FRRUR	Sierra coffeeberry	Frangula rubra ssp. rubra
FRVE	woodland strawberry	Fragaria vesca
GAVE3	nitgrass	Gastridium ventricosum
HEAR5	toyon	Heteromeles arbutifolia
HECOL3	hayfield tarweed	Hemizonia congesta ssp. luzulifolia
HEFI	Fitch's spikeweed	Hemizonia fitchii
HEMIZ	tarweed	Hemizonia spp.
HOBR2	meadow barley	Hordeum brachyantherum
HOMAG	mouse barley	Hordeum marinum ssp. gussonianum
HOMUL	Mediterranean barley	Hordeum murinum ssp. leporinum
IRIS	iris	Iris spp.
JUCA	California walnut	Juglans californica
JUNCU	rush	Juncus spp.
JUNI	black walnut	Juglans nigra
KOMA	junegrass	Koeleria macrantha
LAFR2	Fremont's tidytips	Layia fremontii
LAOCO	flatspine stickweed	Lappula occidentalis var. occidentalis
LASE	prickly lettuce	Lactuca serriola
LASTH	goldfields	Lasthenia spp.

Table 14.--Index of Plant Symbols and Common and Scientific Plant Names--Continued

Plant symbol	Local common name	Scientific name
LEPID	pepperweed	Lepidium spp.
LETR5	beardless wildrye	Leymus triticoides
LIALA	white meadowfoam	Limnanthes alba ssp. alba
LIDE3	tanoak	Lithocarpus densiflorus
LIDEE	shrub tanoak	Lithocarpus densiflorus var. echinoides
LIMNA	meadowfoam	Limnanthes spp.
LOHI2	California honeysuckle	Lonicera hispidula
LOLIU	ryegrass	Lolium spp.
LOPEM2	Italian ryegrass	Lolium perenne ssp. multiflorum
LUBI	annual lupine	Lupinus bicolor
LUPIN	lupine	Lupinus spp.
LYCE	club moss	Lycopodium cernuum
MAAQ2	tall Oregon grape	Mahonia aquifolium
MAST4	starry false Solomons seal	Maianthemum stellatum
MEHI	burclover	Medicago hispida
MENTH	mint	Mentha spp.
MIMUL	monkeyflower	Mimulus spp.
MORUS	mulberry	Morus spp.
MURI2	deergrass	Muhlenbergia rigens
NAPU4	purple needlegrass	Nassella pulchra
NAVAR	navarretia	Navarretia spp.
NEOL	oleander	Nerium oleander
OLEU	olive	Olea europaea
PADI3	dallisgrass	Paspalum dilatatum
PEDU2	hairypink	Petrorhagia dubia
PHAL2	alpine timothy	Phleum alpinum
PHOTI	chokeberry	Photinia spp.
PICH4	Chinese pistache	Pistacia chinensis
PICO	lodgepole pine	Pinus contorta
PIJE	Jeffrey pine	Pinus jeffreyi
PILA	sugar pine	Pinus lambertiana
PIPO	ponderosa pine	Pinus ponderosa
PISA2	foothill pine	Pinus sabiniana
PLAGI	popcornflower	Plagiobothrys
PLANT	plantain	Plantago spp.
PLRA	California sycamore	Platanus racemosa
POA	bluegrass	Poa spp.
POFR2	Fremont cottonwood	Populus fremontii
POPUL	cottonwood	Populus spp.
PREM	bitter cherry	Prunus emarginata
PRIL	hollyleaf cherry	Prunus ilicifolia
PSILO	wooly marbles	Psilocarphus spp.
PSME	Douglas-fir	Pseudotsuga menziesii
PTAQ	western brackenfern	Pteridium aquilinum
PUGR2	pomegranate	Punica granatum
PURSH	bitterbrush	Purshia spp.
PYPI2	whitevein shinleaf	Pyrola picta
QUBE5	scrub oak	Quercus berberidifolia
QUCH2	canyon live oak	Quercus chrysolepis
QUDO	blue oak	Quercus douglasii
QUDU	California scrub oak	Quercus dumosa
QUDU4	leather oak	Quercus durata
QUERC	oak	Quercus spp.
QUKE	California black oak	Quercus kelloggii
QULO	valley oak	Quercus lobata
QUVA	huckleberry oak	Quercus vacciniifolia
QUWI2	interior live oak	Quercus wislizeni
RANUN	buttercup	Ranunculus spp.
RICE	wax currant	Ribes cereum
RINE	Sierra currant	Ribes nevadense
RIRO	Sierra gooseberry	Ribes roezlii
ROCA2	California wildrose	Rosa californica
RUBUS	blackberry	Rubus spp.

Table 14.--Index of Plant Symbols and Common and Scientific Plant Names--Continued

Plant symbol	Local common name	Scientific name
RUCR	curly dock	Rumex crispus
RUDI2	Himalaya blackberry	Rubus discolor
RUPA	western thimbleberry	Rubus parviflorus
RUUR	California blackberry	Rubus ursinus
SAALV	golden willow	Salix alba var. vitellina
SAEX	coyote willow	Salix exigua
SALA6	arroyo willow	Salix lasiolepis
SALIX	willow	Salix spp.
SANIC5	blue elderberry	Sambucus nigra ssp. cerulea
SASO	creeping sage	Salvia sonomensis
SCACO4	hardstem tule	Scirpus acutus var. occidentalis
SCIRP	bulrush	Scirpus ssp.
SEHA2	Hansen's spikemoss	Selaginella hansenii
SEPU4	Sierra mock stonecrop	Sedella pumila
SIDAL	checkerbloom	Sidalcea spp.
SOHA	Johnsongrass	Sorghum halepense
SYAL	common snowberry	Symphoricarpos albus
TAAR3	athel	Tamarix articulata
TACA8	medusahead	Taeniatherum caput-medusae
TADI2	baldcypress	Taxodium distichum
TARAX	dandelion	Taraxacum spp.
TOCA	California torreya	Torreya californica
TODI	Pacific poison oak	Toxicodendron diversilobum
TRBOL	broadleaf starflower	Trientalis borealis ssp. latifolia
TRDE	cowbag clover	Trifolium depauperatum
TRDU	yellow salsify	Tragopogon dubius
TRERE2	butter-n-eggs	Triphysaria eriantha ssp. eriantha
TRHI4	rose clover	Trifolium hirtum
TRHY3	white brodiaea	Triteleia hyacinthina
TRIFO	clover	Trifolium spp.
TRLA4	vinegarweed	Trichostema lanceolatum
TRPR2	red clover	Trifolium pratense
TYPHA	cattail	Typha spp.
UMCA	California laurel	Umbellularia californica
VECAC2	California false hellebore	Veratrum californicum var. californicum
VERBA	mullein	Verbascum spp.
VICA5	California wild grape	Vitis californica
VICIA	vetch	Vicia spp.
VIOLA	violet	Viola spp.
XANTH2	cocklebur	Xanthium ssp.
ZIFR	Fremont's deathcamas	Zigadenus fremontii

Table 15a.--Recreational Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite inves
in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The ra
limitation with the highest value. Only the three highest value limitations are listed. There may be more limita
fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria and of the ab
describing the limitations is given at the end of the table)

Map symbol and soil name	Pct. of map unit	Camp areas		Picnic areas		Pl
		Limitations	Value	Limitations	Value	Limit

The interpretation for camp areas evaluates the following soil properties at variable depths in the soil: floodi slope; depth to bedrock; depth to a cemented pan; fragments less than, equal to, or more than 3 inches in size; sodiu salinity (EC); a clayey surface layer; Unified classes for a high content of organic matter (PT, OL, and OH); soil du permeability (Ksat) that is too rapid, allowing seepage in some climates.

The interpretation for picnic areas evaluates the following soil properties at variable depths in the soil: floo wetness, slope, depth to bedrock, depth to a cemented pan, salinity (EC), pH, soil dustiness, fragments more than 3 i surface fragments more than 10 inches in size, the amount of sand or clay in the surface layer, Unified classes for a organic matter (PT, OL, and OH), and permeability (Ksat) that is too rapid, allowing seepage in some climates.

The interpretation for playgrounds evaluates the following soil properties at variable depths in the soil: flood wetness, slope, depth to bedrock, depth to a cemented pan, surface fragments more than 10 inches in size, fragments e than 3 inches in size, Unified classes for a high content of organic matter (PT, OL, and OH), soil dustiness, sand or surface layer, pH, salinity (EC), and permeability (Ksat) that is too rapid, allowing seepage in some climates.

Table 15b.--Recreational Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite inves
in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The ra
limitation with the highest value. Only the three highest value limitations are listed. There may be more limita
fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria and of the ab
describing the limitations is given at the end of the table)

The interpretation for paths and trails evaluates the following soil properties at variable depths in the soil: wetness; slope; fragments less than, equal to, or more than 3 inches in size; clay and sand content in the surface la fragments more than or equal to 10 inches in size; Unified classes for a high content of organic matter (PT, OL, and and the hazard of water erosion.

The interpretation for off-road motorcycle trails evaluates the following soil properties at variable depths in ponding; wetness; slope; soil dustiness; fragments less than, equal to, or more than 3 inches in size; sand or clay c layer; and Unified classes for a high content of organic matter (PT, OL, and OH).

The interpretation for lawns, landscaping, and golf fairways evaluates the following soil properties at variable flooding; ponding; wetness; slope; depth to bedrock; depth to a cemented pan; fragments less than, equal to, or more size; Unified classes for a high content of organic matter (PT, OL, and OH); soil dustiness; sand or clay content in surface fragments more than or equal to 10 inches in size; pH; salinity (EC); sodium content (SAR); calcium carbonate content.

Table 16a.--Building Site Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite inves
in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limitation. The ra
limitation with the highest value. Only the three highest value limitations are listed. There may be more limita
fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria and of the ab
describing the limitations is given at the end of the table)

The interpretation for dwellings without basements evaluates the following soil properties, some at variable dep flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as linear extensibil organic Unified classes for low soil strength (PT, OL, and OH), depth to hard or soft bedrock, depth to a thick or th fragments more than 3 inches in size.

The interpretation for dwellings with basements evaluates the following soil properties, some at variable depths flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as linear extensibil organic Unified classes for low strength (PT, OL, and OH), depth to hard or soft bedrock, depth to a thick or thin ce fragments more than 3 inches in size.

The interpretation for small commercial buildings evaluates the following soil properties, some at variable dept flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as linear extensibil depth to hard or soft bedrock, depth to a thick or thin cemented pan, and fragments more than 3 inches in size.

Table 16b.--Building Site Development

(The information in this table indicates the dominant soil condition but does not eliminate the need for
investigation. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the
limitation. The rating is based on the limitation with the highest value. Only the three highest va
listed. There may be more limitations. Fine-earth fractions and rock fragments are reported on a we
explanation of the rating criteria and of the abbreviations used in describing the limitations is g
table)

DAM:				
Dam, manmade	100	Not rated		Not rated

The interpretation for local roads and streets evaluates the following soil properties at variable
flooding, ponding, wetness, slope, organic Unified classes for low soil strength (PT, OL, and OH), amoun
hard or soft bedrock, depth to a thick or thin cemented pan, fragments more than 3 inches in size, bulk
caving potential of the soil.

The interpretation for shallow excavations evaluates the following soil properties at variable dept
flooding, ponding, wetness, slope, subsidence of organic soils, shrink-swell potential expressed as line
percent (LEP), potential for frost action, depth to hard or soft bedrock, depth to a thick or thin cemen
more than 3 inches in size, and soil strength expressed as the AASHTO group index number (AASHTO GI).

Table 17a.--Sanitary Facilities

(The information in this table indicates the dominant soil condition but does not eliminate the need for c
The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the poten
rating is based on the limitation with the highest value. Only the three highest value limitations ar
more limitations. Fine-earth fractions and rock fragments are reported on a weight basis. An explanat
criteria and of the abbreviations used in describing the limitations is given at the end of the table

The interpretation for septic tank absorption fields evaluates the following soil properties at variab
soil: flooding; ponding; wetness; slope; subsidence of organic soils; depth to hard or soft bedrock; depth
permeability that is too rapid, allowing seepage; and permeability that is too slow or an impermeable layer

The interpretation for sewage lagoons evaluates the following soil properties at variable depths in th
ponding, wetness, slope, organic Unified classes for low strength (PT, OL, and OH), depth to hard or soft b
cemented pan, fragments larger than 3 inches in size, and permeability that is too rapid, allowing seepage.

Table 17b.--Sanitary Facilities

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite inves
The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential limita
based on the limitation with the highest value. Only the three highest value limitations are listed. There may b
Fine-earth fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria ar
abbreviations used in describing the limitations is given at the end of the table)

The interpretation for trench sanitary landfill evaluates the following soil properties at variable depths in t ponding, wetness, slope, depth to hard or soft bedrock, depth to a thick or thin cemented pan, fragments 3 to 10 inc content (SAR), pH, clayey or sandy textures, and permeability that is too rapid, allowing seepage in some climates.

The interpretation for area sanitary landfill evaluates the following soil properties at variable depths in the ponding, wetness, slope, depth to bedrock, depth to a cemented pan, and permeability that is too rapid, allowing see

The interpretation for daily cover for landfill evaluates the following soil properties at variable depths in t wetness; slope; depth to bedrock; depth to a cemented pan; fragments more than, equal to, or less than 3 inches in s peat (PT); Unified classes for packing (OL, OH, CH, and MH); sandy or clayey textures; pH; carbonates; sodium conten (EC); soil climate; kaolinitic mineralogy; and permeability that is too rapid, allowing seepage.

Table 18a.--Construction Materials

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investig
the value columns range from 0.00 to 0.99. The closer the value is to 0.00, the greater the limitation. A value of
absolute limitation based on the soil property criteria used to develop the interpretation. Values closer to 1.00
limitations. Limiting features with values of 1.00 have absolutely no limitation and are not shown in the table. Ra
determined by the most limiting value. Fine-earth fractions and rock fragments are reported on a weight basis. An
criteria and of the abbreviations used in describing the limitations is given at the end of the table)

The interpretation for gravel evaluates the content of rock fragments more than .2 inch in size in the bottom or t soil.

The interpretation for sand evaluates the amount of sand and fine gravel in the thickest or bottom layer of the so layers with the Unified engineering class for peat (PT) also are evaluated.

The interpretation for topsoil evaluates the following soil properties at various depths: calcium carbonates, clay density, sand content, soil wetness, rock fragments .2 inch to more than 3 inches in size, content of organic matter (O expressed as the sodium adsorption ratio (SAR), salinity expressed as dS/m of electrical conductivity (EC), depth to be

Table 18b.--Construction Materials

(The information in this table indicates the dominant soil condition but does not eliminate the need for
The numbers in the value columns range from 0.00 to 0.99. The closer the value is to 0.00, the grea
value of 0.00 indicates an absolute limitation based on the soil property criteria used to develop
Values closer to 1.00 indicate lesser limitations. Features with a value of 1.00 have absolutely no
not shown in the table. Rating classes are determined by the most limiting value. Fine-earth fracti
are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used
limitations is given at the end of the table)

The interpretation for reclamation material evaluates the following soil properties at variable dep amount of sand, clay, and fragments; the content of organic matter (OM); the wind erodibility group (WEG water capacity (AWC); pH; salinity (EC); the amount of sodium (SAR); carbonates; and susceptibility of t erosion (K factor).

The interpretation for roadfill evaluates the following soil properties at variable depths in the s potential expressed as linear extensibility percent (LEP), depth to bedrock or a cemented pan, wetness, expressed as AASHTO group index number (AASHTO GIN), and content of fragments.

Table 19a.--Water Management

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsi
numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the potential li
is based on the limitation with the highest value. Only the three highest value limitations are listed.
limitations. Fine-earth fractions and rock fragments are reported on a weight basis. An explanation of t
and of the abbreviations used in describing the limitations is given at the end of the table)

The interpretation for embankments, dikes, and levees evaluates the following soil properties at variabl ponding; wetness; depth to a restrictive layer; fragments more than 3 inches in size; salinity (EC); Unified content of organic matter (PT, OL, and OH); Unified classes that are hard to pack (MH and CH); permeability t allowing seepage; piping as determined by Atterberg limits of liquid limit (LL) and plasticity index (PI); so and gypsum content.

The interpretation for pond reservoir areas evaluates the following soil properties at variable depths i depth to hard or soft bedrock, depth to a cemented pan, marly textures, gypsum content, and permeability that allowing seepage.

Table 19b.--Water Management

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. Only the soils that are used for the production of commonly grown crops or for livestock grazing are listed. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the limitation. The rating is based on the limitation with the highest value. Only the five highest value limitations are listed. There may be more limitations. Fine-earth fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

The interpretation for basin or paddy irrigation evaluates the following soil properties at variable depths in the soil: texture of the surface layer; flooding during the growing season; ponding; slope; depth to hard or soft bedrock; depth to a cemented pan; electrical conductivity (EC); sodium content expressed as sodium adsorption ratio (SAR); sulfur content based on taxonomic placement; permeability more than 3cm/hr, allowing seepage; and available water capacity.

The interpretation for graded border irrigation evaluates the following soil properties at variable depths in the soil: a high clay content and smectitic mineralogy; flooding during the growing season; depth to wetness; slope; depth to hard or soft bedrock; depth to a cemented pan; fragments more than 75 mm in size; permeability less than .5 cm/hr, allowing saturated conditions; available water capacity (AWC); electrical conductivity (EC); sodium content expressed as sodium adsorption ratio (SAR); and sulfur content based on taxonomic placement.

Table 19c.--Water Management

(The information in this table indicates the dominant soil condition but does not eliminate the need for onsite investigation. Only the soils that are used for the production of commonly grown crops or for livestock grazing are listed. The numbers in the value columns range from 0.01 to 1.00. The larger the value, the greater the limitation. The rating is based on the limitation with the highest value. Only the five highest value limitations are listed. There may be more limitations. Fine-earth fractions and rock fragments are reported on a weight basis. An explanation of the rating criteria and of the abbreviations used in describing the limitations is given at the end of the table)

		Limitations	Value	Limitations	Value	Limitations	Value
686: Redsluff taxadjunct	70	No limitations		No limitations		No limitations	

The interpretation for sprinkler irrigation evaluates the following soil properties at variable depths in the soil: texture of the surface layer; clay content more than 60 percent; flooding during the growing season; ponding; depth to wetness; available water capacity (AWC); slope; depth to hard or soft bedrock; depth to a cemented pan; fragments larger than 75 millimeters; sodium content (SAR); pH; clayey or sandy textures; permeability less than .5 cm/hr, resulting in saturated soil conditions; soil erodibility expressed as a K factor; electrical conductivity (EC); sodium content expressed as sodium adsorption ratio (SAR); and sulfur content based on taxonomic placement.

The interpretation for drip or trickle irrigation evaluates the following soil properties at variable depths in the soil: flooding, ponding, depth to wetness, depth to hard or soft bedrock, depth to a cemented pan, electrical conductivity (EC), sodium content expressed as sodium adsorption ratio (SAR), sulfur content based on taxonomic placement, and permeability less than .5 cm/hr.

The interpretation for furrow irrigation evaluates the following soil properties at variable depths in the soil: texture of the surface layer; clay content and smectitic mineralogy; flooding during the growing season; ponding; depth to wetness; available water capacity (AWC); slope; depth to soft bedrock; depth to a cemented pan; fragments larger than 75 millimeters; sodium content (SAR); pH; clayey or sandy textures; permeability less than .5 cm/hr, resulting in saturated soil conditions; permeability more than 15 cm/hr, resulting in seepage; electrical conductivity (EC); sodium content expressed as sodium adsorption ratio (SAR); and sulfur content based on taxonomic placement.

Table 24.--Water Features

(See text for definitions of terms used in this table. The annual frequency of ponding and flooding is the mos
class listed for the soil. Frequent flooding is more limiting than occasional flooding, and occasional fl
limiting than rare flooding. Absence of an entry indicates that the feature is not a concern or that data

Table 26.--Classification of the Soils

(An asterisk in the first column indicates a taxadjunct to the series. See text for a description of those characteristics that are outside the range of the series)

Soil name	Family or higher taxonomic class
Almendra	Fine-loamy, mixed, superactive, thermic Pachic Haploxerolls
Anita	Clayey, smectitic, thermic, shallow Xeric Duraquerts
*Anita taxadjunct	Clayey, smectitic, thermic, shallow Vertic Endoaquepts
Aquic Xerofluvents	Coarse-loamy, mixed, active, nonacid Aquic Xerofluvents
Arbuckle	Fine-loamy, mixed, superactive, thermic Typic Haploxeralfs
*Argonaut taxadjunct	Fine, mixed, superactive, thermic Ultic Haploxeralfs
Auburn	Loamy, mixed, superactive, thermic Lithic Haploxerepts
Beatsonhollow	Loamy-skeletal, mixed, superactive, thermic Lithic Haplohumults
*Beatsonhollow taxadjunct	Loamy, mixed, superactive, thermic Lithic Haplohumults
Beecee	Medial-skeletal, mixed, mesic Typic Haploxerands
Bigridge	Fine-loamy, mixed, active, mesic Ultic Haploxeralfs
Billscabin	Loamy-skeletal, isotic, mesic Typic Dystroxerepts
Blavo	Very-fine, smectitic, thermic Xeric Duraquerts
Boga	Fine-loamy, mixed, superactive, thermic Typic Haploxeralfs
Bonepile	Medial-skeletal, glassy, frigid Typic Haploxerands
*Bonepile taxadjunct	Loamy-skeletal, isotic, mesic Ultic Haploxerands
Bonneyridge	Coarse-loamy, isotic, mesic Typic Dystroxerepts
Bosquejo	Fine, smectitic, thermic Typic Haploxererts
*Bosquejo taxadjunct	Fine, smectitic, thermic Chromic Haploxererts
Bottlehill	Loamy-skeletal, mixed, active, mesic Xeric Haplohumults
Boxrobber	Loamy-skeletal, mixed, active, mesic, shallow Ultic Haploxeralfs
Busacca	Fine, mixed, superactive, thermic Pachic Haploxerolls
Butteside	Fine, mixed, superactive, thermic Typic Haploxeralfs
Calcic Haploxerolls	Mixed, superactive, thermic Calcic Haploxerolls
Campbellhills	Loamy-skeletal, mixed, superactive, thermic Ultic Argixerolls
Carhart	Fine, smectitic, thermic Xeric Endoaquerts
*Carhart taxadjunct	Clayey, smectitic, thermic, shallow Xeric Endoaquerts
Cerpone	Fine-loamy, parasesquic, mesic Ultic Haploxeralfs
Charger	Coarse-loamy, mixed, superactive, thermic Typic Haploxerolls
Chawanakee	Loamy, mixed, active, mesic, shallow Typic Dystroxerepts
Cherokeespring	Fine-loamy, mixed, superactive, thermic Ultic Palexeralfs
Cherotable	Fine-loamy, parasesquic, thermic Ultic Haploxeralfs
Chico	Fine-loamy, mixed, superactive, thermic Pachic Argixerolls
Chinacamp	Loamy-skeletal, mixed, superactive, thermic Haplic Palexeralfs
Clear Lake	Fine, smectitic, thermic Xeric Endoaquerts
Clearhayes	Fine-loamy, mixed, superactive, thermic Typic Haploxeralfs
Coalcanyon	Loamy-skeletal, parasesquic, thermic Pachic Ultic Argixerolls
*Coalcanyon taxadjunct	Loamy-skeletal, mixed, superactive, thermic Haplic Palexeralfs
Codora	Fine, mixed, superactive, thermic Fluventic Haploxerepts
Columbia	Coarse-loamy, mixed, superactive, nonacid, thermic Oxyaquic Xerofluvents
*Columbia taxadjunct	Coarse-loamy, mixed, superactive, nonacid, thermic Aeric Fluvaquents
Conejo	Fine-loamy, mixed, superactive, thermic Pachic Haploxerolls
Coonhollow	Loamy-skeletal, parasesquic, thermic Pachic Ultic Argixerolls
Coridge	Loamy-skeletal, mixed, superactive, thermic Ultic Haploxeralfs
Craigsaddle	Fine-loamy, mixed, active, thermic Ultic Haploxeralfs
Crystalhill	Coarse-loamy, mixed, active, thermic Typic Haploxerepts
Dejonah	Fine-loamy, mixed, active, frigid Andic Haplohumults
Dixmine	Clayey-skeletal, parasesquic, mesic Typic Haploxerults
Dodgeland	Fine, smectitic, thermic Xeric Endoaquerts
Doemill	Loamy, mixed, superactive, thermic Lithic Haploxeralfs
Dunstone	Loamy, mixed, superactive, thermic, shallow Ultic Haploxeralfs
Duraquerts	Fine, smectitic, thermic Xeric Duraquerts
Duric Xerarents	Thermic Duric Xerarents
Durixeralfs	Clayey-skeletal, smectitic, thermic, shallow Haplic Durixeralfs
Durixeralfs	Fine-loamy, mixed, superactive, thermic Typic Durixeralfs
Durixeralfs	Loamy-skeletal, mixed, superactive, thermic, shallow Typic Durixeralfs
Durixerolls	Fine-loamy, mixed, superactive, thermic Durixerolls
Dystroxerepts	Loamy-skeletal, mixed, active, thermic Typic Dystroxerepts
Earlal	Loamy-skeletal, magnesic, mesic Lithic Haploxeralfs
Eastbiggs	Fine, mixed, active, thermic Abruptic Durixeralfs

Table 26.--Classification of the Soils--Continued

Soil name	Family or higher taxonomic class
Edjobe	Fine, smectitic, thermic Xeric Epiaquerts
Elsey	Fine-loamy, mixed, superactive, thermic Oxyaquic Haplohumults
Endoaquolls	Endoaquolls
Esquon	Fine, smectitic, thermic Xeric Epiaquerts
Fallager	Clayey, mixed, superactive, thermic, shallow Typic Durixeralfs
Farwell	Fine-loamy, mixed, superactive, thermic Fluventic Haploxerepts
Featherfalls	Fine-loamy, mixed, active, mesic Ultic Palexeralfs
Fernandez	Fine-loamy, mixed, active, thermic Ultic Palexeralfs
Flagcanyon	Loamy-skeletal, mixed, superactive, thermic Haplic Durixeralfs
*Flagcanyon taxadjunct	Fine-loamy, mixed, superactive, thermic Haplic Durixeralfs
Flanly	Fine-loamy, mixed, active, thermic Ultic Haploxeralfs
Flumewall	Loamy-skeletal, isotic, mesic Lithic Haploxerults
Fluvaquentic Humaquepts	Fine-loamy, mixed, superactive, mesic Fluvaquentic Humaquepts
Fluvaquents, loamy	Mesic Fluvaquents
Galt	Fine, smectitic, thermic Aquic Durixererts
*Galt taxadjunct	Fine-loamy, mixed, superactive, thermic Typic Durixerepts
Gianella	Coarse-loamy, mixed, superactive, nonacid, thermic Typic Xerofluvents
Govstanford	Coarse-loamy over clayey, mixed over smectitic, superactive, nonacid, thermic Oxyaquic Xerofluvents
Greenwell	Medial, amorphic, frigid Humic Haploxerands
Gridley	Fine, smectitic, thermic Typic Argixerolls
*Gridley taxadjunct	Fine, smectitic, thermic Typic Durixerolls
Griffgulch	Clayey-skeletal, mixed, active, mesic Ultic Haploxeralfs
Hamslough	Clayey-skeletal, smectitic, thermic Typic Petraquepts
Haplic Palexeralfs	Loamy-skeletal, mixed, superactive, thermic Haplic Palexeralfs
Haploxeralfs	Loamy-skeletal, mixed, active, thermic Ultic Haploxeralfs
Haploxeralfs, terrace	Haploxeralfs
Haploxerands	Haploxerands
Haploxerands, granitic till	Frigid Typic Haploxerands
Haploxerands, volcanic till	Frigid Haploxerands
Haploxererts	Fine, smectitic, thermic Haploxererts
Haploxerolls	Fine-loamy, mixed, superactive, thermic Haploxerolls
Hartsmill	Loamy-skeletal, mixed, superactive, thermic Ultic Palexeralfs
Hietanen	Fine-loamy, mixed, active, mesic Typic Haploxerults
Hoda	Fine, kaolinitic, mesic Ultic Haploxeralfs
Holillipah	Sandy, mixed, thermic Typic Xerofluvents
Holland	Fine-loamy, mixed, semiactive, mesic Ultic Haploxeralfs
Hotaw	Fine-loamy, mixed, active, mesic Ultic Haploxeralfs
Hurleton	Loamy-skeletal, mixed, active, thermic Ultic Haploxeralfs
Ignord	Coarse-loamy, mixed, superactive, thermic Pachic Haploxerolls
Igo	Loamy, mixed, superactive, thermic, shallow Typic Durixeralfs
Islandbar	Coarse-loamy, mixed, active, mesic Typic Dystroxerepts
Jocal	Fine-loamy, mixed, active, mesic Typic Haploxerults
*Jocal taxadjunct	Fine-loamy, mixed, semiactive, mesic Andic Haploxerults
Jokerst	Loamy, mixed, superactive, thermic Lithic Haploxeralfs
Katskillhill	Fine, mixed, superactive, thermic Ultic Palexeralfs
Kimball	Fine, mixed, active, thermic Mollic Palexeralfs
Kusalslough	Fine, mixed, superactive, nonacid, thermic Oxyaquic Xerofluvents
Lavatop	Medial-skeletal, amorphic, mesic Humic Haploxerands
Lewisflat	Fine-loamy, mixed, semiactive, mesic Andic Haploxerults
Lithic Xerorthents	Loamy, mixed, active, nonacid, mesic Lithic Xerorthents
Liveoak	Fine-loamy, mixed, superactive, thermic Typic Haploxerolls
*Liveoak taxadjunct	Fine-loamy, mixed, superactive, thermic Typic Calcixerepts
Llanoseco	Fine, smectitic, thermic Chromic Haploxererts
Loafercreek	Fine-loamy, mixed, superactive, thermic Ultic Haploxeralfs
Loemstone	Fine-loamy, mixed, superactive, thermic Typic Haploxeralfs
Lofgren	Very-fine, smectitic, thermic Xeric Epiaquerts
Logtrain	Loamy-skeletal, mixed, active, mesic Typic Haploxerults
Lomarica	Clayey-skeletal, mixed, superactive, thermic Ultic Haploxeralfs
Lucksev	Clayey, mixed, superactive, thermic, shallow Typic Haploxeralfs
Lumpkin	Medial-skeletal, amorphic, mesic Lithic Haploxerands
*Lumpkin taxadjunct	Medial-skeletal, amorphic, frigid Lithic Haploxerands
Lydon	Loamy-skeletal, isotic, mesic Andic Dystroxerepts

Table 26.--Classification of the Soils--Continued

Soil name	Family or higher taxonomic class
Mac	Fine-loamy, mixed, active, mesic Typic Haploxerults
Marcum	Fine, smectitic, thermic Typic Argixerolls
*Mariposa taxadjunct	Fine-loamy, parasesquic, mesic Typic Haploxerults
McNair	Medial-skeletal, amorphic, frigid Humic Haploxerands
Mildred	Fine, mixed, active, mesic Ultic Haploxeralfs
Millerridge	Fine-loamy, mixed, active, mesic Ultic Haploxeralfs
Minniecreek	Fine-loamy, mixed, active, mesic Ultic Haploxeralfs
*Moda taxadjunct	Fine, mixed, active, thermic Abruptic Durixeralfs
Mounthope	Fine-loamy, mixed, superactive, thermic Ultic Haploxeralfs
Mountyana	Fine-loamy, isotic, mesic Andic Haplohumults
Mudwash	Medial over loamy, mixed over isotic, mesic Alfic Humic Haploxerands
Munjar	Loamy-skeletal, mixed, superactive, thermic Typic Durixeralfs
Neerdobe	Fine, smectitic, thermic Xeric Duraquerts
Obskel	Loamy-skeletal, isotic, mesic Andic Haploxerults
Obstruction	Fine-loamy, isotic, mesic Andic Haploxerults
Olashes	Fine-loamy, mixed, superactive, thermic Mollic Haploxeralfs
Ordferry	Fine, smectitic, thermic Xeric Duraquerts
Oregongulch	Coarse-loamy, mixed, active, thermic Typic Haploxerepts
Oroshore	Loamy-skeletal, mixed, active, thermic Ultic Haploxeralfs
Oroville	Fine, mixed, active, thermic Aquic Durixeralfs
Oxyaquic Xerofluvents	Coarse-loamy, mixed, superactive, nonacid, thermic Oxyaquic Xerofluvents
Oxyaquic Xerofluvents	Fine, mixed, superactive, nonacid, thermic Oxyaquic Xerofluvents
Oxyaquic Xerofluvents	Fine-loamy, mixed, superactive, nonacid, thermic Oxyaquic Xerofluvents
Palexerults	Kaolinitic, superactive, thermic Typic Palexerults
Paradiso	Fine, mixed, semiactive, mesic Andic Haploxeralfs
Parkshill	Fine-loamy, mixed, active, thermic Ultic Palexeralfs
Parrott	Fine-silty, mixed, superactive, thermic Fluventic Haploxerepts
Perkins	Fine-loamy, mixed, superactive, thermic Mollic Haploxeralfs
Powderhouse	Medial-skeletal, glassy, frigid Humic Haploxerands
Powellton	Fine-loamy, parasesquic, mesic Andic Haplohumults
Rackerby	Loamy-skeletal, mixed, active, thermic, shallow Typic Haploxerepts
Redbone	Medial over loamy-skeletal, amorphic over isotic, mesic Ultic Haploxerands
Redding	Fine, mixed, active, thermic Abruptic Durixeralfs
Redsluff	Fine-loamy, mixed, superactive, thermic Mollic Haploxeralfs
*Redsluff taxadjunct	Fine, mixed, superactive, thermic Typic Haploxeralfs
Redswale	Loamy-skeletal, mixed, superactive, thermic, shallow Typic Durixeralfs
Redtough	Loamy, mixed, superactive, thermic, shallow Typic Durixeralfs
Retsongulch	Loamy-skeletal, isotic, mesic Typic Haploxerults
Rockstripe	Loamy-skeletal, mixed, active, nonacid, mesic Lithic Xerorthents
Rogerville	Fine, mixed, mesic Xeric Kanhaplohumults
*Rogerville taxadjunct	Fine-loamy, mixed, subactive, frigid Andic Haplohumults
Schott	Loamy-skeletal, mixed, semiactive, mesic Andic Haploxeralfs
Shakeridge	Medial-skeletal, ferrihydritic, mesic Humic Haploxerands
Sites	Fine, parasesquic, mesic Xeric Haplohumults
*Sites taxadjunct	Fine, parasesquic, mesic Andic Palehumults
Slideland	Fine-loamy, mixed, superactive, thermic Haplic Palexeralfs
Sobrante	Fine-loamy, mixed, active, thermic Mollic Haploxeralfs
Sommeyflat	Fine-loamy, mixed, superactive, thermic Ultic Haploxeralfs
Spine	Loamy-skeletal, mixed, active, mesic Lithic Haploxerults
*Spine taxadjunct	Loamy-skeletal, mixed, active, mesic Lithic Haploxeralfs
Stagpoint	Loamy-skeletal, mixed, active, frigid Andic Haplohumults
*Subaco taxadjunct	Fine, smectitic, thermic Aquic Durixererts
Sunnyslope	Loamy-skeletal, mixed, superactive, thermic, shallow Ultic Haploxeralfs
Surnuf	Fine, parasesquic, mesic Ultic Palexeralfs
*Surnuf taxadjunct	Fine, parasesquic, mesic Ultic Haploxeralfs
Swedesflat	Loamy, mixed, active, thermic, shallow Ultic Haploxeralfs
Thermalito	Fine-loamy, mixed, active, thermic Abruptic Durixeralfs
Thermalrocks	Loamy-skeletal, mixed, superactive, thermic Lithic Haplohumults
Thompsonflat	Fine-loamy, mixed, active, thermic Ultic Haploxeralfs
Timberisland	Medial-skeletal, ferrihydritic, mesic Humic Haploxerands
Toadtown	Fine, parasesquic, mesic Andic Haplohumults
Trainer	Fine-loamy, mixed, active, thermic Aquic Haploxerepts
Tuscan	Clayey, mixed, superactive, thermic, shallow Typic Durixeralfs
*Tuscan taxadjunct	Fine, mixed, superactive, thermic Typic Durixeralfs
Tusccoll	Fine-loamy, mixed, semiactive, mesic Andic Palexeralfs
Typic Haploxeralfs	Thermic Typic Haploxeralfs

Table 26.--Classification of the Soils--Continued

Soil name	Family or higher taxonomic class
Typic Haploxeralfs, magnesic	Magnesic, mesic Typic Haploxeralfs
Typic Petraquepts	Clayey, smectitic, thermic, shallow Typic Petraquepts
Typic Xerofluvents	Coarse-loamy, mixed, superactive, nonacid, thermic Typic Xerofluvents
Typic Xerofluvents	Sandy-skeletal, mixed, superactive, nonacid, thermic Typic Xerofluvents
Ultic Haploxeralfs	Mesic Ultic Haploxeralfs
Ultic Haploxeralfs, conglomerate	Thermic Ultic Haploxeralfs
Ultic Haploxeralfs, mesic	Mesic Ultic Haploxeralfs
Ultic Haploxeralfs, sandstone	Thermic Ultic Haploxeralfs
Ultic Haploxeralfs, sandstone, low elevation	Fine-loamy, mixed, superactive, thermic Ultic Haploxeralfs
Ultic Haploxeralfs, thermic	Loamy-skeletal, mixed, superactive, thermic Ultic Haploxeralfs
Ultic Haploxeralfs, thermic, high terrace	Thermic Ultic Haploxeralfs
Vermet	Fine-silty, mixed, superactive, thermic Aquic Haploxerepts
Vina	Coarse-loamy, mixed, superactive, thermic Pachic Haploxerolls
Vistarobles	Clayey, mixed, active, thermic, shallow Abruptic Durixeralfs
Wafap	Clayey-skeletal, mixed, superactive, thermic Oxyaquic Argixerolls
Walkermine	Loamy-skeletal, mixed, active, mesic Lithic Dystroxerepts
Whitecabin	Fine, smectitic, thermic Aquic Haploxererts
Wickscorner	Fine-loamy, mixed, superactive, thermic Ultic Palexeralfs
Wilsoncreek	Fine-silty, mixed, superactive, thermic Cumulic Haploxerolls
Woodleaf	Clayey-skeletal, magnesic, mesic Ultic Haploxeralfs
Xerofluvents	Typic Xerofluvents
Xerorthents, shallow	Thermic Xerorthents
Xerorthents, tailings	Thermic Xerorthents

Table 27.--Classification by Order, Suborder, Great Group, and Subgroup

(This table shows the taxonomic units in the survey are arranged by order, suborder, great group, and subgroup. An asterisk indicates a taxadjunct to the series. See text for a description of those characteristics that are outside the range of the series)

Order: Alfisols
 Suborder: Xeralfs
  Great Group: Durixeralfs
   Subgroup: Typic Durixeralfs

 Fallager----------Clayey, mixed, superactive, thermic, shallow Typic Durixeralfs
 Tuscan----------Clayey, mixed, superactive, thermic, shallow Typic Durixeralfs
*Tuscan taxadjunct----------Fine, mixed, superactive, thermic Typic Durixeralfs
 Durixeralfs----------Fine-loamy, mixed, superactive, thermic Typic Durixeralfs

Appendices

Appendix A—Wildlife Habitat: Vegetation, Agriculture, Wetlands, and Miscellaneous Landscape Features

Prepared by Joseph G. Silveira, Wildlife Biologist, U.S. Fish and Wildlife Service, Sacramento National Wildlife Refuge Complex, Willows, California.

Habitat from Mayer and Laudenslayer (1988), except where indicated by an asterisk (*). Numbers in brackets refer to the general soil map units in this survey area.

Vegetation

Valley & Foothill Riparian [1, 2, 8, 9, 15, canyon bottoms]
Valley Oak Woodland [1, 2, 8, 12], savanna [11, 12]
Fresh Emergent Wetland [1, 2, 3, 4, 6]
Annual Grassland [10, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22]
Blue Oak Woodland [14, 16, 19, 23]; savanna [17, 18, 22]
Blue Oak–Foothill Pine [18, 20, 21, 23]
Chamise–Redshank Chaparral [18]; limited to the Cohasset Ridge
Mixed Chaparral with scattered blue oak, foothill pine, and interior live oak [18, 20, 21, 23, 24, 26]; with scattered ponderosa pine and incense cedar [24]
* Mixed Chaparral with patches of Annual Grassland (on shallow soils) [25]
Montane Hardwood–Conifer [26]
Ponderosa Pine [27, 30, 34]
Sierran Mixed Conifer [27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39]
* Ultramafic Vegetation—blue oak (some areas in Butte County), foothill pine, Jeffery pine, and McNab cypress (near Magalia) and mixed chaparral in areas of ultramafic geology [30]
Montane Chaparral [39]; limited by fire
Montane Riparian [34]; inclusions
Wet Meadow [34, 38, 39]; inclusions

Agriculture

Pasture [3, 6, 8, 9, 11]
Cropland—rice [3, 4, 6, 12]; row crops [1, 5, 7, 9]; hay [9]
Orchard–Vineyard—walnuts [1, 2, 7, 8, 9, 11]; almonds [1, 2, 7, 8, 9]; prunes [1, 2, 5, 11, 12]; peaches, nectarines, and kiwis [11]; olives and citrus [12]

Wetlands

Riverine—perennial and intermittent streams and rivers [1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39]

Lacustrine—permanently flooded lakes and reservoirs and intermittent lakes and ponds, including vernal pools [1, 3, 4, 6, 8 10, 12, 13, 14, 17, 20, 24, 27, 30]

Miscellaneous Landscape Features

Cut banks, sand and gravel bars, and mudflats [1, 2, 11, 13, 14]
Volcanic mudflow rock outcrops [10, 15, 16, 17 18, 25, 37]
Lava flows and basalt outcrops [14, 35]
Metavolcanic rock outcrops [19, 20, 21, 22, 26, 27, 28, 29, 30, 31, 32, 38]
Diorite, gabbro, and quartz diorite rock outcrops [23, 24, 33, 34]
Ultramafic rock outcrops [30, 31]
Large andesite boulders on the surface [36]
Andesite mudflows [37]

Appendix B—Wildlife Habitat: Relationship of Landforms and Soils to Vegetation, Agriculture, and Miscellaneous Landscape Features

Prepared by Joseph G. Silveira, Wildlife Biologist, U.S. Fish and Wildlife Service, Sacramento National Wildlife Refuge Complex, Willows, California.

Habitat from Mayer and Laudenslayer (1988), except where indicated by an asterisk (*). Numbers in brackets refer to the general soil map units in this survey area.

Valley

Flood Plains Along the Sacramento and Feather Rivers

THERMIC SOILS ON FLOOD PLAINS IN THE SACRAMENTO VALLEY

Alluvial deposits—Sacramento River active meander belt and alluvial deposits [1]; Feather River terrace and fan alluvial deposits [2]

[1] Parrott–Gianella–Farwell
[2] Xerorthents, Tailings–Gianella

Valley & Foothill Riparian [1, 2]
Valley Oak Woodland [1, 2]
Fresh Emergent Wetland [1, 2]
Pasture [1, 2]
Riverine [1, 2]
Lacustrine, i.e., oxbow lakes [1]
Cropland—row crops [1]
Orchard–Vineyard–-walnuts, almonds, prunes [1, 2]
Miscellaneous features—cut banks, sand and gravel bars, mudflats [1, 2]

Northeast Sacramento Valley Flood Basins

THERMIC SOILS IN FLOOD BASINS IN THE SACRAMENTO VALLEY

Basin deposits [3, 4, 5, 6]

[3] Lofgren–Blavo
[4] Esquon–Neerdobe
[5] Bosquejo–Galt
[6] Gridley Taxadjunct–Subaco Taxadjunct

Fresh Emergent Wetland [3, 4, 6]
Pasture [3, 6]
Riverine [3, 4, 5, 6]
Lacustrine, i.e., duck ponds [3, 4, 6]
Cropland—rice [3, 4, 6]; row crops [5]
Orchard–Vineyard—prunes [5]
Miscellaneous features—mudflats

Northeast Sacramento Valley Alluvial Fans

THERMIC SOILS ON ALLUVIAL FANS IN THE SACRAMENTO VALLEY

Modesto Formation [7, 8, 9]

[7] Olashes
[8] Conejo–Almendra–Vina
[9] Haploxerolls–Durixerolls

Valley & Foothill Riparian [8, 9]
Valley Oak Woodland [8]
Pasture [8, 9]
Riverine [7, 8, 9]
Lacustrine, i.e., Teichert Pond [8]
Cropland—row crops [7, 9]; hay [9]
Orchard–Vineyard—almonds, walnuts [7, 8, 9]

Southern Cascade and Northern Sierra Nevada Fan Terraces

THERMIC SOILS THAT FORMED IN CASCADE ALLUVIUM; ON FAN TERRACES IN THE SACRAMENTO VALLEY

Red Bluff Formation [10]

[10] Redsluff–Redtough–Redswale

Annual Grassland [10]
Riverine [10]
Lacustrine, i.e., vernal pools [10]

THERMIC SOILS THAT FORMED IN SIERRA NEVADA ALLUVIUM; ON LOW FAN TERRACES IN THE SACRAMENTO VALLEY

River Bank Formation [12]

[12] Eastbiggs–Duric Xerarents–Kimball

Valley Oak Woodland [12]; savanna on Kimball soils
Annual Grassland [12]
Riverine [12]
Lacustrine, i.e., vernal pools [12]
Cropland—rice [12] on Eastbiggs soils and on Duric Xerarents
Orchard–Vineyard—olives, citrus, prunes [12] on Kimball soils

THERMIC SOILS THAT FORMED IN SIERRA NEVADA ALLUVIUM; ON INTERMEDIATE AND HIGH FAN TERRACES IN THE SACRAMENTO VALLEY

Laguna Formation [13]

[13] Thompsonflat–Oroville–Vistarobles

Annual Grassland [13]
Riverine [13]
Lacustrine, i.e., vernal pools [13]
Miscellaneous features—cut bank along the Feather River at Highway 70

Feather River Terraces

THERMIC SOILS ON FEATHER RIVER TERRACES IN THE SACRAMENTO VALLEY

Modesto Formation (Modesto-Riverbank Formation) [11]

[11] Liveoak–Boga–Loemstone

Valley Oak Woodland—savanna [11]
Annual Grassland
Pasture [11]
Orchard–Vineyard—peaches, nectarines, walnuts, kiwis [11]
Miscellaneous features—cut banks

Foothills

Northern Sierra Nevada and Southern Cascade Foothills

THERMIC SOILS ON LOVEJOY BASALT AND IONE SEDIMENTS ON SIERRA NEVADA FOOTHILLS

Lovejoy basalt and limited Ione sediments) [14]

[14] Palexerults–Rock Outcrop, Basalt–Coalcanyon

Blue Oak Woodland [14]
Annual Grassland [14]
Riverine [14]
Lacustrine, i.e., vernal pools [14]
Miscellaneous features—lava flows, basalt rock outcrops

THERMIC SOILS ON STRATH TERRACES ON VOLCANIC CASCADE FOOTHILLS

Low Tuscan Formation (strath terraces) [15]

[15] Tuscan–Clearhayes–Typic Xerofluvents

Valley Foothill Riparian Forest [15] on Xerofluvents
Annual Grassland [15]
Riverine [15]

THERMIC SOILS ON VOLCANIC CASCADE FOOTHILLS

Low Tuscan Formation—sandstone [16]; mudflow [17]; sandstone and mudflow [18]

[16] Lucksev–Butteside–Carhart
[17] Doemill–Jokerst
[18] Xerorthents, Shallow–Typic Haploxeralfs–Doemill

Ridgetops—annual grasses, scattered blue oak
Canyons: northwest slopes—chaparral; southeast slopes—grasses, blue oak
Savanna—widely spaced trees and/or shrubs

Annual Grassland [16, 17, 18]
Blue Oak Woodland—[16] at the higher elevations, [17] savanna, [18] savanna
Blue Oak–Foothill Pine [18]
Chamise–Redshank Chaparral [18]; limited to the Cohasset Ridge
Mixed Chaparral with scattered blue oak, foothill pine, and interior live oak [18]; limited
Riverine [16, 17, 18]
Lacustrine, i.e., vernal pools [17]
Miscellaneous features—volcanic mudflow rock outcrops

THERMIC SOILS ON METAMORPHIC SIERRA NEVADA FOOTHILLS

Smartville Formation (metavolcanic rock) [19; 20; 21; 22]

[19] Dunstone–Loafercreek–Argonaut Taxadjunct
[20] Dunstone–Loafercreek–Oroshore
[21] Mounthope-Hartsmill
[22] Ultic Haploxeralfs, Thermic, High Terrace

Ridgetops—annual grasses, scattered blue oak
Canyons: northwest slopes—chaparral; southeast slopes—grasses, blue oak

Savanna—widely spaced trees and/or shrubs

Annual Grassland [19, 20, 22]
Blue Oak Woodland—[19] savanna, [22] savanna with scattered shrubs
Blue Oak–Foothill Pine [20, 21]
Mixed Chaparral with scattered blue oak, foothill pine, and interior live oak [20, 21]
Riverine [19, 20, 21, 22]
Lacustrine [20]
Miscellaneous features—metavolcanic rock outcrops

THERMIC SOILS ON PLUTONS ON SIERRA NEVADA FOOTHILLS

Swedesflat Pluton and Bald Rock Pluton (diorite, gabbro, gabbro-diorite rocks) [23]; (quartz diorite) [24]

[23] Flanly–Swedesflat–Parkshill
[24] Crystalhill–Oregongulch–Craigsaddle

Ridgetops—annual grasses, scattered blue oak
Canyons: northwest slopes—chaparral; southeast slopes—grasses, blue oak

Blue Oak–Foothill Pine [23]
Mixed Chaparral with scattered blue oak, foothill pine, and interior live oak [23, 24] and with scattered ponderosa pine and incense cedar [24]
Riverine, i.e., canyon bottoms [23, 24]
Lacustrine [24]
Miscellaneous features—diorite, gabbro, and quartz diorite rock outcrops

MESIC SOILS ON VOLCANIC CASCADE FOOTHILLS

Mid Tuscan Formation (mudflow) [25]

[25] Rockstripe–Ultic Haploxeralfs, Mesic–Ultic Haploxeralfs

The distribution of vegetation is affected by elevation and precipitation.

* Mixed Chaparral with patches of Annual Grassland (on shallow soils) [25]
Valley Foothill Riparian (canyon bottoms)
Riverine, i.e., canyon bottoms [25]
Miscellaneous features—volcanic mudflow rock outcrops

MESIC SOILS ON METAMORPHIC SIERRA NEVADA FOOTHILLS

Smartville Formation (metavolcanic rock) [26]

[26] Bigridge–Minniecreek

Montane Hardwood–Conifer [26]
Mixed Chaparral with scattered blue oak, foothill pine, and interior live oak [26]
Riverine, i.e., canyon bottoms [26]
Miscellaneous features—metavolcanic rock outcrops

Southern Cascade and Northern Sierra Nevada Mountains

MESIC SOILS ON VOLCANIC CASCADE MOUNTAINS

High Tuscan Formation [27, 28, 29]

[27] Paradiso–Schott–Tusccoll
[28] Mountyana–Beecee–Lydon

[29] Redbone

Ponderosa Pine [27]
Sierran Mixed Conifer [27, 28, 29]
Riverine [27, 28, 29]
Lacustrine [27]
Miscellaneous features—volcanic rock outcrops

MESIC SOILS ON METAMORPHIC SIERRA NEVADA MOUNTAINS

Mixed rocks of metasedimentary, metavolcanic, and ultramafic origin [30, 31, 32, 33]

[30] Surnuf–Griffgulch–Typic Haploxeralfs, Magnesic
[31] Toadtown–Powellton–Rogerville
[32] Obstruction–Obskel–Bottlehill

Ponderosa Pine [30]
Sierran Mixed Conifer [30, 31, 32]
* Ultramafic vegetation—blue oak (some areas in Butte County), foothill pine, Jeffery pine, and McNab cypress (near Magalia); mixed chaparral in areas of ultramafic geology [30]
Wet Meadow (inclusions)
Riverine [30, 31, 32]
Lacustrine [30]
Miscellaneous features—metavolcanic and ultramafic rock outcrops

MESIC SOILS ON PLUTONS IN THE SIERRA NEVADA MOUNTAINS

Concow, Bald Rock, Cascade, Lumpkin, and Grizzly Plutons [33, 34]

[33] Islandbar–Featherfalls–Chawanakee
[34] Bonneyridge–Chawanakee–Lewisflat

Sierran Mixed Conifer [34] on Bonneyridge soils
Ponderosa Pine [35] on Islandbar soils
Montane Riparian [34]
Wet Meadow [34]
Riverine [33, 34]
Miscellaneous features—quartz diorite rock outcrops

MESIC SOILS ON VOLCANIC SIERRA NEVADA MOUNTAINS

Lovejoy basalt [35]

[35] Mudwash–Shakeridge–Timberisland

Sierran Mixed Conifer [35]
Riverine [35]
Miscellaneous features—lava flows

FRIGID SOILS ON VOLCANIC CASCADE MOUNTAINS

Andesitic mudflows [36]

[36] Bonepile

Sierran Mixed Conifer [36]; dominated by white fir
Wet Meadow (inclusions)
Riverine [36]
Miscellaneous features—large andesite boulders on the surface

FRIGID SOILS ON VOLCANIC SIERRA NEVADA MOUNTAINS

Andesitic mudflows [37]

[37] Powderhouse–McNair–Greenwell

Sierran Mixed Conifer [37]; dominated by white fir with some red fir
Riverine [37]
Miscellaneous features—andesite mudflows

FRIGID SOILS ON METAMORPHIC SIERRA NEVADA MOUNTAINS

Metavolcanic rocks [38]

[38] Dejonah–Stagpoint

Sierran Mixed Conifer [38]; dominated by white fir with some red fir
Montane Riparian (inclusions)
Wet Meadow [38]
Riverine [38]
Miscellaneous features—metavolcanic rock outcrops

FRIGID SOILS ON MORAINES IN THE SIERRA NEVADA AND CASCADE MOUNTAINS

Glacial till, including part of the Grizzly Pluton [39]

[39] Haploxerands, Volcanic Till–Haploxerands, Granitic Till

Sierran Mixed Conifer [39]; dominated by white fir with some red fir
Montane Chaparral [39]; limited by fire
Wet Meadow [39]
Riverine [39]

NRCS Accessibility Statement

The Natural Resources Conservation Service (NRCS) is committed to making its information accessible to all of its customers and employees. If you are experiencing accessibility issues and need assistance, please contact our Helpdesk by phone at 1-800-457-3642 or by e-mail at ServiceDesk-FTC@ftc.usda.gov. For assistance with publications that include maps, graphs, or similar forms of information, you may also wish to contact our State or local office. You can locate the correct office and phone number at http://offices.sc.egov.usda.gov/locator/app.

CONVENTIONAL AND SPECIAL SYMBOLS LEGEND

CULTURAL FEATURES

BOUNDARIES

- National, state, or province
- County or parish
- Minor civil division
- Reservation (national forest or park, state forest or park)
- Land grant
- Limit of soil survey (label) and/or denied access area
- Field sheet matchline & neatline
- Previously Published Survey

OTHER BOUNDARY (label)

- Airport, airfield
- Cemetery
- City/county park

STATE COORDINATE TICK
1 890 000 FEET

LAND DIVISION CORNER
(section and land grants)

GEOGRAPHIC COORDINATE TICK

TRANSPORTATION

- Divided roads
- Other roads
- Trail

ROAD EMBLEM AND DESIGNATIONS

- Interstate (173, 79, 345)
- Federal (287, 410, 224)
- State (52, 52, 347)
- County, farm or ranch

RAILROAD

POWER TRANSMISSION LINE

PIPELINE

FENCE

LEVEES

- Without road
- With road
- With railroad
- Single side slope (showing actual feature location)

DAMS

- Medium or Small (W)

LANDFORM FEATURES

- Prominent hill or peak
- Soil Sample Site (S)

MISCELLANEOUS CULTURAL FEATURES

- Farmstead, house
- Church
- School
- Other Religion (Mt Carmel)
- Located object (Ranger Station)
- Tank (Petroleum)
- Lookout Tower
- Oil and/or Natural Gas Wells
- Windmill
- Lighthouse

HYDROGRAPHIC FEATURES

STREAMS

- Perennial stream, double line
- Perennial stream, single line — Label only
- Intermittent stream — Label only
- Drainage end — Label only

DRAINAGE AND IRRIGATION

- Double-line canal (label) (CANAL)
- Perennial drainage and/or irrigation ditch — Label only
- Intermittent drainage and/or irrigation ditch — Label only

SMALL LAKES, PONDS AND RESERVOIRS

- Perennial water
- Miscellaneous water
- Flood pool line (FLOOD POOL LINE)

MISCELLANEOUS WATER FEATURES

- Spring
- Well, artesian
- Well, irrigation

SPECIAL SYMBOLS FOR SOIL SURVEY AND SSURGO

SOIL DELINEATIONS AND SYMBOLS (100, 121)

LANDFORM FEATURES

- Bedrock escarpment
- Other than bedrock escarpment
- Short steep slope
- Gully
- Depression, closed
- Sinkhole

PITS

- Borrow pits
- Gravel pit
- Mine or quarry
- Landfill

MISCELLANEOUS SURFACE FEATURES

- Blowout
- Clay spot
- Gravelly spot
- Lava flow
- Marsh or swamp
- Rock outcrop (includes sandstone and shale)
- Saline spot
- Sandy spot
- Severely eroded spot
- Slide or slip
- Sodic spot
- Spoil area
- Stony spot
- Very stony spot
- Wet spot
